

PHYS 602: Statistical Mechanics

Spring 2021

Syllabus

Instructor

Prof. Sebastian Deffner
Physics, Rm. 311
deffner@umbc.edu

Time and Place

WeFr 1:00pm – 2:15pm
Blackboard Collaborate

Office hours

By appointment on Webex

Textbook (required)

Introduction to Statistical Physics

K. Huang
Chapman and Hall/CRC, ISBN 978-1-4200-7902-9

Literature (highly recommended)

- **Thermodynamics and an Introduction to Thermostatistics (2nd edition)**
H. B. Callen
John Wiley & Sons, ISBN 978-0-4718-6256-7
- **Statistical Physics I**
M. Toda, R. Kubo, & N. Saitô
Springer, ISBN 978-3-5405-3662-8
- **Statistical Physics II**
R. Kubo, M. Toda, N. Hashitsume
Springer, ISBN 978-3-5405-3833-2

Scope

Review of statistical mechanics of ideal systems, non-ideal gases, phase transitions, Monte Carlo methods, non-equilibrium systems.

Dates

- First day of class: January 27, 2021
- Last day of class: May 12, 2021
- No class on
 - March 17, 2021 (spring break)
 - March 19, 2021 (spring break)
- Midterm exam: March 05 – March 24, 2021
- Final exam: May 05 – May 20, 2021

Course Objectives and Learning Goals

This course will provide a general overview of the main subjects in modern statistical physics. It will discuss key concepts and methods, introduce the relevant terminology, and develop the main ideas of theoretical understanding. You will solve quantitative and complex problems and develop rigorous derivations. As an advanced course special emphasis will be put on deep understanding and mathematically thorough reasoning.

At the end of the course, you should be familiar with:

1. Methods of Statistical Physics

- Probability theory and distributions
- Thermodynamics (phenomenology and exact differential equations)
- Meanfield theory, in particular Ginzburg-Landau theory
- Stochastic processes (Brownian motion and Langevin dynamics)
- Evolution in phase and probability space (Louisville, diffusion and Fokker-Planck equations)
- Monte-Carlo method

2. Systems in thermal equilibrium

- Fundamentals of thermodynamics (laws of thermodynamics, quasistatic processes, equilibrium response functions, equations of state for ideal and non-ideal gases, Maxwell relations)
- Statistical approach (random walks, ergodic hypothesis, statistical ensemble, Maxwell-Boltzmann distribution and thermodynamic ensembles)
- Equilibrium phase transitions (phase equilibrium, Clayperon equation, Maxwell construction, Ginzburg-Landau theory, critical exponents)
- Quantum statistics (Fermi-Dirac and Bose-Einstein distribution)
- Quantum states of matter (photon bunching, Bose-Einstein condensation, superfluidity, superconductors)

3. Systems close to thermal equilibrium

- Linear response and Onsager relations
- Transport phenomena (sound waves, heat conduction, Navier-Stokes equation)
- Nonequilibrium phase transitions (Kibble-Zurek mechanism)

4. Systems far from thermal equilibrium

- Maxwell's demon
- Fluctuation theorem and Jarzynski equality

Course Format

PHYS 602 is a traditional lecture course. Nevertheless, individual reading will play an important role, probably more so than in any other physics course. Only the most important principles and connections will be discussed in class, whereas a big part of the content will be left for reading. Given the new normal of having to live through a pandemic the course will be taught entirely online using Blackboard Collaborate.

Feel free to ask questions during the lectures, whether you have difficulties with a concept, notice an error, or want to hear more details about an aspect of the material. It is important that we do not move on until all the important issues are settled.

Homework

There will be a homework assignment **every** week. The assignments will be posted on Blackboard every Wednesday after class, and submission is due the following Wednesday at 1:00pm.

A homework assignment will consist of two parts:

- Three more complex problems that have to be worked out and written up in detail at home as a usual homework assignment and submitted. These problems will be graded to 4 points each. It will be expected that the submitted problems be written up in a clear, legible, and organized fashion, complete with appropriate verbal comments and figures, very much like examples in the textbook.
- A reading assignment complementary to the material discussed in class. The homework assignments will contain four questions about the reading material, which will amount to another 8 points.

You are allowed, in fact, encouraged, to form study groups and discuss the material and homework questions with each other. However, at the end, the homework solution must be your own work, not a group product. I will give no credit for obvious copies. After all, you are left to your own devices at the tests and in real life. Learn from each other, but be able to work on your own.

Late homework will not be accepted (no exceptions). Homework will be submitted at the beginning of class on the date it is due. Only submissions in OUR OWN HANDWRITING will be accepted. Submission are to be uploaded as pdf into Blackboard.

Exams

All exams will be "take home". There will be one midterm exam during the semester and one final exam. For both exams you will have 2 weeks to work on the solutions. Expect the exams to be rather challenging and make good use of the 2 weeks, i.e., do not start working the day before you have to submit.

Grades

Your grade will be determined according to the following distribution of points:

1. Homework assignments (13): 20 points each; 260 points in total.
2. Midterm exam: 40 points, weighted by a factor of 8; 320 points in total.
3. Final exam: 40 points, weighted by a factor of 8; 320 points in total.

This adds up to a possible total of 900 points. Approximately, A will be given above 85%, B for at least 70%, C for at least 55%, and D for at least 40%.

Full credit requires complete and correct solutions. Similarly to the homework assignments each problem in the exams will be graded to 4 points each. This grading scheme might appear rather generous. However, full credit requires complete and mathematical rigorous solutions. Since PHYS602 is an advanced course, mathematical rigor and physically sound reasoning will be expected.

“Incomplete” is given only in exceptional cases. To be considered for an “I”, you must have taken at least one midterm exam, submitted 10 homework solutions, and have C or better standing at the time of incapacitation.

Academic Integrity

”By enrolling in this course, each student assumes the responsibilities of an active participant in UMBC’s scholarly community in which everyone’s academic work and behavior are held to the highest standards of honesty. Cheating on a test could result in disciplinary action that may include, but is not limited to, suspension or dismissal.” More on the requirements of academic integrity can be found at <http://www.umbc.edu/gradschool/procedures/integrity.html>

Applied to this course, a proven case of misconduct during a test or a blatant copy or plagiarism of a homework solution “earns” zero on the assignment in question. A second offense will result in failing the course.

On my end, I promise well-prepared lectures, careful and timely grading, and openness.

Title IX

As an instructor, I am considered a Responsible Employee, per UMBC’s Policy on Prohibited Sexual Misconduct, Interpersonal Violence, and Other Related Misconduct. While my goal is for you to be able to share information related to your life experiences through discussion and written work, I want to be transparent that as a Responsible Employee I am required to report disclosures of sexual assault, domestic violence, relationship violence, stalking, and/or gender-based harassment to the University’s Title IX Coordinator.

As an instructor, I also have a mandatory obligation to report disclosures of or suspected instances of child abuse or neglect.

The purpose of these reporting requirements is for the University to inform you of options, supports and resources; you will not be forced to file a report with the police. Further, you are able to receive supports and resources, even if you choose to not want any action taken. Please note that in certain situations, based on the nature of the disclosure, the University may need to take action.

COVID-19

Please see this [Google doc](#) for UMBC Policies and Resources during COVID-19.

Disabilities

- If you have any condition such as a physical or learning disability, which will make it difficult for you to carry out the work as described or which will require academic accommodations, please notify me ASAP, but definitely during the first two weeks of classes.
- If you are taking the exam with Student Disability Services, remind me by email 48-96 hours before every exam to give me time for proper preparation. You also need to schedule the exam with Student Disability Services.
